

Creative Curriculum Project 2017-19

Feedback and Evaluation Form – End of Theme

Q1 – How many teachers/non-teaching staff were involved in the project? How many pupils were affected by the project? Were other people (e.g. parents, external organisations etc.) involved in the project?

We worked on the time subject with our primary school (25 persons) and our secondary school (20 persons). All pupils from these locations were involved, so that nearly 150 pupils worked on the subject. There were no external people involved.

Q2 – How did you plan the project theme? How did you work collaboratively?

The Erasmus+ -group presented the main outlines of the project. Every class team independently prepared for the subject, but all teams were in exchange about the project. The primary school started a whole project week, where all pupils could choose between several offers, while the secondary school worked internally in the class groups for two days. The results were presented in the children and youth conferences.

Q3 – How do you feel about the project now? Did you get more energy and motivation? Was it a heavier workload? (If yes, why? Are there any changes possible for the next theme?)

The project days have generally been accepted by colleagues and pupils. Some teachers were happy that there was a specific subject for project days, because in the past they had to make up their minds for adequate themes. All were satisfied with the project theme and said they would start a similar approach again with another theme. The workload was adequate.

Q4 – What did you do well during this project theme? What will you do differently next time?

Next time we could try to integrate the project theme in normal school process without organizing special project days. This could possibly lead to more natural and integrated work on a subject.

Q5 – Any other comments?

Presenting the results on the blog was quite easy and offers a good way to motivate teachers for working on Erasmus+ -themes. Students and parents can have a look at the results.
